e di accurato
lavoro
artigianale

Patrizia Volpato, founder and artistic director of the company, is growing up in her father's glass blowing workshop in Venice. In 1980, Patrizia initially establishes her company as Lamp. Its collections soon become popular in home market with the classical and elegant style inherited from venetian culture and history. The handcrafted Murano glass and precious crystal represent the key elements of Lamp's production.

Consolidated in domestic market, Lamp extends its horizon to new frontier and innovates the design, meeting varied demands range from traditional classical to simple modern style. In order to further distinguish itself in lighting industry, in 2009, the name of the company changes officially into Patrizia Volpato.

Recent years, responding to customers requirements and creativity nature, Patrizia Volpato starts to realize more and more large scale lighting installation which expresses ultimately the craftsmanship of venetian masters and innovative design.

Today, after more than 40 years of practice in lighting industry, the idea of carrying forward the glass crafting tradition integrating with new materials and italian design has become the core value of the company.

"If you can imagine it, we can make it happen."
This is the slogan called out by all Patrizia Volpato's bespoke creations. Every single piece is specially designed, handcrafted and one of a kind.

From our desk to the customer's house, Patrizia Volpato follows step by step the design and the development of its creation and ensures quality, security and uniqueness: this new point of view allow us to take part to the design of environments, important public and private buildings for citizens and for celebrity too.

Yesterday

The art of glassmaking in Venice can be tracked back to the seventh century BC. In the twelfth century the glass production concentrated on Murano Island. Being the centre for commerce and trade between west and east, Venetian glass artisans perfected their techniques because of the opportunities of recomposing different knowledge and techniques from all over the world. And this is also the reason why the glass manufacturing in Venice has always been a leading position over the centuries and making the most beautiful glass work.

Today

Even today Venice continues to produce one of the most precious glass work. The Venetian glass artisans create their unique artworks following their centuries old tradition and applying secret techniques handed down in the family from generation to generation: Murrina's glass, glass plates, lampwork glass, blown glass, cast with 24 carat gold ... so this is how they achieve the fame of making the most prestigious glass work that is admired all over the world today.

Craftsmanship

Unlike industrial manufacturing, glass making in Venice is an art form and purely handmade, only the dexterity and creativity of the artisans are able to realize and to give that particular value of exclusivity and prestige that machines would never be able to obtain.

The tradition

Patrizia Volpato received the passion and love of glassmaking tradition from her family, combined it with lighting production. Today Patrizia Volpato as a company works closely with architects and designers, a creative space where they get inspired and be creative and adventurous with design, materials and technologies.

Versatility and Italian Design

With their creativity and determination, Patrizia Volpato proposes new lighting solutions, inspired by both the avant-garde concept and the tradition, offering numerous options with the guarantee of a quality that lasts in time, and with the signature of 'italian design' which is the fruit of our historical, artistic and cultural heritage.

Patrizia Volpato

Patrizia Volpato is the founder and art director of the company. She worked in a glass blowing workshop in Venice during her teenage period.

In 1980, Patrizia established a lighting company called Lamp.

In 2009 the company's name was changed officially to Patrizia Volpato.

Today, We are in lighting industry for more than 30 years.
